

- * ALL CBD PROTECTED & CERTIFIED BY HOLOGRAPHIC SECURITY
- * 2000 MG OF NANO CBD THERAPEUTIC WS POWDER
- * 125 SERVINGS PER CONTAINER (@ 16MG)
- * ONLY \$1.04 PER 16MG SERVING
- * INSTANTLY MIXES WITH FOOD & DRINK
- * >96% BIO-ABSORPTION
- * 10X GREATER BIO-AVAILABILITY THAN CBD OIL
- * PHARMACOKINETIC VERIFIED LAB TEST (PK)
- * NO PESTICIDES OR CONTAMINANTS
- * NO HEAVY METALS OR CHEMICALS
- * 100% USA CERTIFIED FARM ORIGIN

24000mg Kit | \$1465.70
12000mg Kit | \$728.35
6000mg Kit | \$364.18
2000mg Kit | \$129.95
750mg Kit | \$49.95

**** USAGE GUIDE FOR WATER SOLUBLE NANO CANNABIDIOL (CBD) POWDER - ASSUMING 3-5 SERVINGS DAILY FOR EACH DOSAGING RANGE ****

BY BODY WEIGHT:	DAILY MICRO DOSE:	DAILY STANDARD DOSE:	DAILY MACRO DOSE:
100 - 120 LBS	.5 SCOOP - 8 MG	1 SCOOP - 16 MG	2 SCOOPS - 32 MG
121 - 170 LBS	1 SCOOP - 16 MG	2 SCOOPS - 32 MG	3 SCOOPS - 48 MG
171 - 210 LBS	1 SCOOP - 16 MG	2 SCOOPS - 32 MG	3 SCOOPS - 48 MG
211 - 250+ LBS	2 SCOOPS - 32 MG	3 SCOOPS - 48 MG	5 TO 6 SCOOPS - 80-96 MG

CANNABIGEROL (CBG) | Water-Soluble Nano Powder

Molecular Structure: C₂₁H₃₂O₂
Final Form: Water-Soluble Nano-Emulsion Powder
Bioavailability: +95%
Potency (COA): 21.91%

Cannabigerol (CBG) is considered the “Mother of all Cannabinoids”, with stronger known effects than Cannabidiol (CBD) in the areas of anti-inflammatory and analgesic action. Cognitively, CBG enhances CB1 receptor activity in such a way, that users report noticeable gains with mental focus and clarity of complex thought. CBG is best used in the morning and throughout the early afternoon, starting slow and working tolerances up slowly to achieve maximum results.

BOOSTED THERAPY

Mildly Psychoactive

CANNABINOL (CBN) | Water-Soluble Nano Powder

Molecular Structure: C₂₁H₂₆O₂
Final Form: Water-Soluble Nano-Emulsion Powder
Bioavailability: +95%
Potency (COA): 25.63%

Cannabinol (CBN) represents the “C” in THC, and is a very rare and expensive minor cannabinoid to produce in volume. Being mildly psychoactive, CBN delivers remarkable results in terms of deep REM sleep potential. As a matter of biochemistry, 5mg of CBN is stronger than 10mg of Valium, and should thereby be used responsibly and in low amounts for new users. Peak success with this molecule is achieved by consuming one hour before bedtime. Start with one scoop of powder, mixed and shaken well in the included shot/mixer bottle.

Psychoactive

DELTA-8 (THC) | Water-Soluble Nano Powder

Molecular Structure: C₂₁H₃₀O₂
Final Form: Water-Soluble Nano-Emulsion Powder
Bioavailability: +95%
Potency (COA): 19.68%

DELTA-8 THC is an isomer of CBD, which of course comes from 50 state legal industrial hemp (cannabis sativa L). In contrast to its analogue (Delta-9 THC), Delta-8 has a double bond on the 8th carbon, versus Delta-9’s double bond on the 9th carbon. This small difference in the molecule, gives it a slightly weaker binding affinity to the CB1 receptor than Delta-9, but this is a good thing in two ways: One, the “head and body high” is super clear when compared to D9, but it comes without the potential of paranoia, anxiety and tolerance buildup of D9. And two, the HEMPTIUM™ Delta-8 water soluble nano powder, with its highly accelerated uptake potential....can start providing therapeutic action within 30 minutes of use...and last for up to 7-8 hours on a single dose. VERY IMPORTANT: Start slow, really slow. Only use 1/2 of a scoop daily to begin, moving up your dose by small amounts over the next few days to find your sweet spot.
